

Energy services in sahelian areas

Water supply,
electrification,
household energy

Studies, project design, project management

Our domain of activities is the implementation of basic services in relation with energy and local development:

- Village water supply.
- Electrification.
- Household energy.
- Small-scale irrigation.

Our assignments are mainly located on the field and cover a wide range of studies, project design and project management :

- Demand analysis.
- Technical and financial engineering.
- Organization and monitoring of water and electricity supply services in rural areas.
- Training and support to the actors of local development.

Our capabilities are based on the mobilization of a confirmed national and international expertise, the management of efficient software tools and a regional establishment through solid external partnerships :

- a team of professionals with proven field experience.
- software tools: database systems.
- geographical information systems, design and sizing of hydraulic and electrical networks.
- agreements of partnership with african and european consulting firms.
